Education

B.Tech in CSE AIML (AKTU) **Aug 2024– Sep 2028**
ABES Engineering College *CGPA-8.0*

Class 12th (CBSE) **2022**
Ryan International School *76.2%*

Class 10th (CBSE) **2020**
St.Xavier's institution *92.6%*

Technical Skills

Skills: JAVA DEVELOPER UI/UX & WEB DESIGN AI TOOLS COLLABORATION & PROJECT MANAGEMENT CYBER SECURITY

Internships

IBM SkillsBuild – Generative AI Intern **March 2025 – June2025**

Completed a 3-week internship focused on Generative AI concepts and applications.

Developed a Text-to-Image Generator project using AI models to generate images from textual prompts.

Explored prompt engineering techniques to improve image quality and relevance.

Gained hands-on experience with AI tools, model workflows, and practical implementation of generative AI solutions.

IBM SkillsBuild – Cyber Security Intern **SEP 2025 – DEC 2024**

Completed a 3-week internship focused on cybersecurity fundamentals, threat analysis, and digital security practices.

Studied common cyber threats including phishing, malware, ransomware, and network vulnerabilities.

Performed security assessments and explored techniques for identifying and mitigating potential risks in digital systems.

Gained hands-on exposure to cybersecurity tools, best practices, and strategies for securing endpoints and online

Projects

ResumeIND – AI Resume Analyzer **May 2025**

- Developed an AI-powered resume analysis system that evaluates resumes and provides feedback on skills, keywords, and overall profile strength
- Implemented Natural Language Processing (NLP) techniques to extract and analyze candidate information from resumes.

Text-to-Image Generator **Jan 2024**

Developed a text-to-image generation application that creates images from user-provided text prompts using generative AI models.

Applied prompt engineering techniques to improve image quality, relevance, and creativity of generated outputs.Automatic Plant Irrigation System **Feb 2024**

- Developed an automated irrigation system using Arduino to measure soil moisture via analog sensors
- Implemented threshold-based algorithms to trigger a water pump when soil moisture drops below set level
